Experience

Polestar Analytics

Senior Software Engineer *September 2025 – Present*

- Led frontend modernization by migrating a production-scale monolithic application to a **Microfrontend Architecture**, enabling **4+ independent teams** to ship in parallel, improving scalability, deployment independence, and maintainability across business modules.
- Architected distributed backend systems by decomposing a **Node.js monolith** into **5+ Python microservices** using **gRPC**, **RabbitMQ**, and **Redis**, enabling efficient asynchronous processing, fault isolation, and high-throughput inter-service communication.
- Engineered and launched **PromoPulse**, an AI-powered promotion analytics and optimization module that processes enterprise datasets from **Databricks** and applies **LLM** and predictive AI models to generate optimized promotional recommendations, scenario simulations, and forecasting insights for KPIs such as **ROI**, **trade spend**, **revenue uplift**, and campaign effectiveness through interactive dashboards.
- Developed intelligent **OCR and document automation systems** using **Claude 4.6 Sonnet**, **Llama 3**, and vector-search-based retrieval pipelines to extract, classify, and transform unstructured enterprise documents including PDFs, invoices, reports, and emails into structured datasets with **92% extraction accuracy**, supporting context windows up to **128K tokens** for large-document processing workflows.

Software Engineer *November 2023 – August 2025*

- Engineered and scaled **1Platform**, an enterprise-grade B2B analytics and ETL SaaS platform using **React.js**, **Node.js**, **PostgreSQL**, **Azure**, and **Databricks**, onboarding **4+ enterprise clients** and enabling large-scale data ingestion, transformation, governance, and analytics workflows.
- Built advanced **ETL ingestion and transformation pipelines** that automated complex manual SQL-based workflows, reducing data engineering effort by approximately **90%** and significantly accelerating enterprise pipeline creation and execution.
- Boosted API performance by **∼30%** (600ms → 420ms) using server-side pagination, lazy loading, and optimized Delta Lake querying strategies, reducing network payload from 2MB to 20KB/page and cutting network transfer overhead by approximately **90%**.
- Collaborated directly with **4 enterprise clients** including **Knipper**, **BDS**, **Zydus**, and **Insigneo** to deliver tailored PoCs, workflow automations, analytics solutions, and enterprise data platforms aligned with business requirements.

Projects

PacketLens (Link) | *React.js, Node.js, Express, Socket.IO, Tailwind CSS*

- Built a **real-time network analysis dashboard** streaming live data via **WebSockets**, classifying traffic across **20+ applications** with custom binary parsers — zero external packet library dependencies.
- Architected a **multi-threaded load balancer** with fast-path worker distribution, processing packets across **configurable parallel workers** with a rule-based blocking engine supporting **IP, App, and Domain** filtering.

Skills

Languages: C++, JavaScript/TypeScript, PHP, Python, SQL
Libraries and Frameworks: React.js, Node.js, Ant Design, Chart.js, FastApi, Modular SCSS
Developer/AI Tools: Github, Azure Boards, Jira, Copilot, Cursor, Claude Code
Concepts: Data Structures & Algorithms, OOP, DBMS, Distributed Systems
Soft Skills: Team Leadership, Cross-functional Collaboration, Client-facing Delivery

Education

Maharaja Agrasen Institute of Technology **August 2019 – July 2023**
Bachelor of Technology in Computer Science (CGPA: 8.50/10) *Delhi, India*

Achievements

Awarded multiple **Quarterly Impact Awards** at Polestar Analytics — Dashing Debut & Rising Star.
Received **Appreciation Certificate** for developing high-quality asset **ProfitPulse** that improved financial analytics for clients.
Solved **400+** DSA problems on **LeetCode** and **CodeStudio** and **CodeChef**.
